To whom it may concern

I would like to recommend Robert Melville for an award in our department. I taught Robert in my differential equations class last spring. I enjoyed very much having him in my class. He is extremely bright and hardworking. He consistently performed well on tests, quizzes and homework assignments, showed a willingness to participate in class discussion, and was always ready to go to the board and work a problem or demonstrate a concept. He earned an A in my course, which is no easy feat for most, but came very easily to Robert

I believe Robert will go far in mathematics; he has the flexible and creative mind which will allow him to make a name for himself wherever he goes. I have no hesitation in giving him my highest recommendation.
